madfu | Business

Madfu Merchant Onboarding

Wireframes · Proposed / Product Design

Source of truth	Agreed product decisions, 28 Oct 2026, building on 27 Oct (supersede v5, the 23 Oct KYB-first journey and the 15 Oct wireframe specification where they differ)
Prototype	Merchant Onboarding Lab · Madfu Proposed (77 scenarios)
Data	Synthetic. Integrations are simulated. Not production behaviour.

Proposed / Product Design

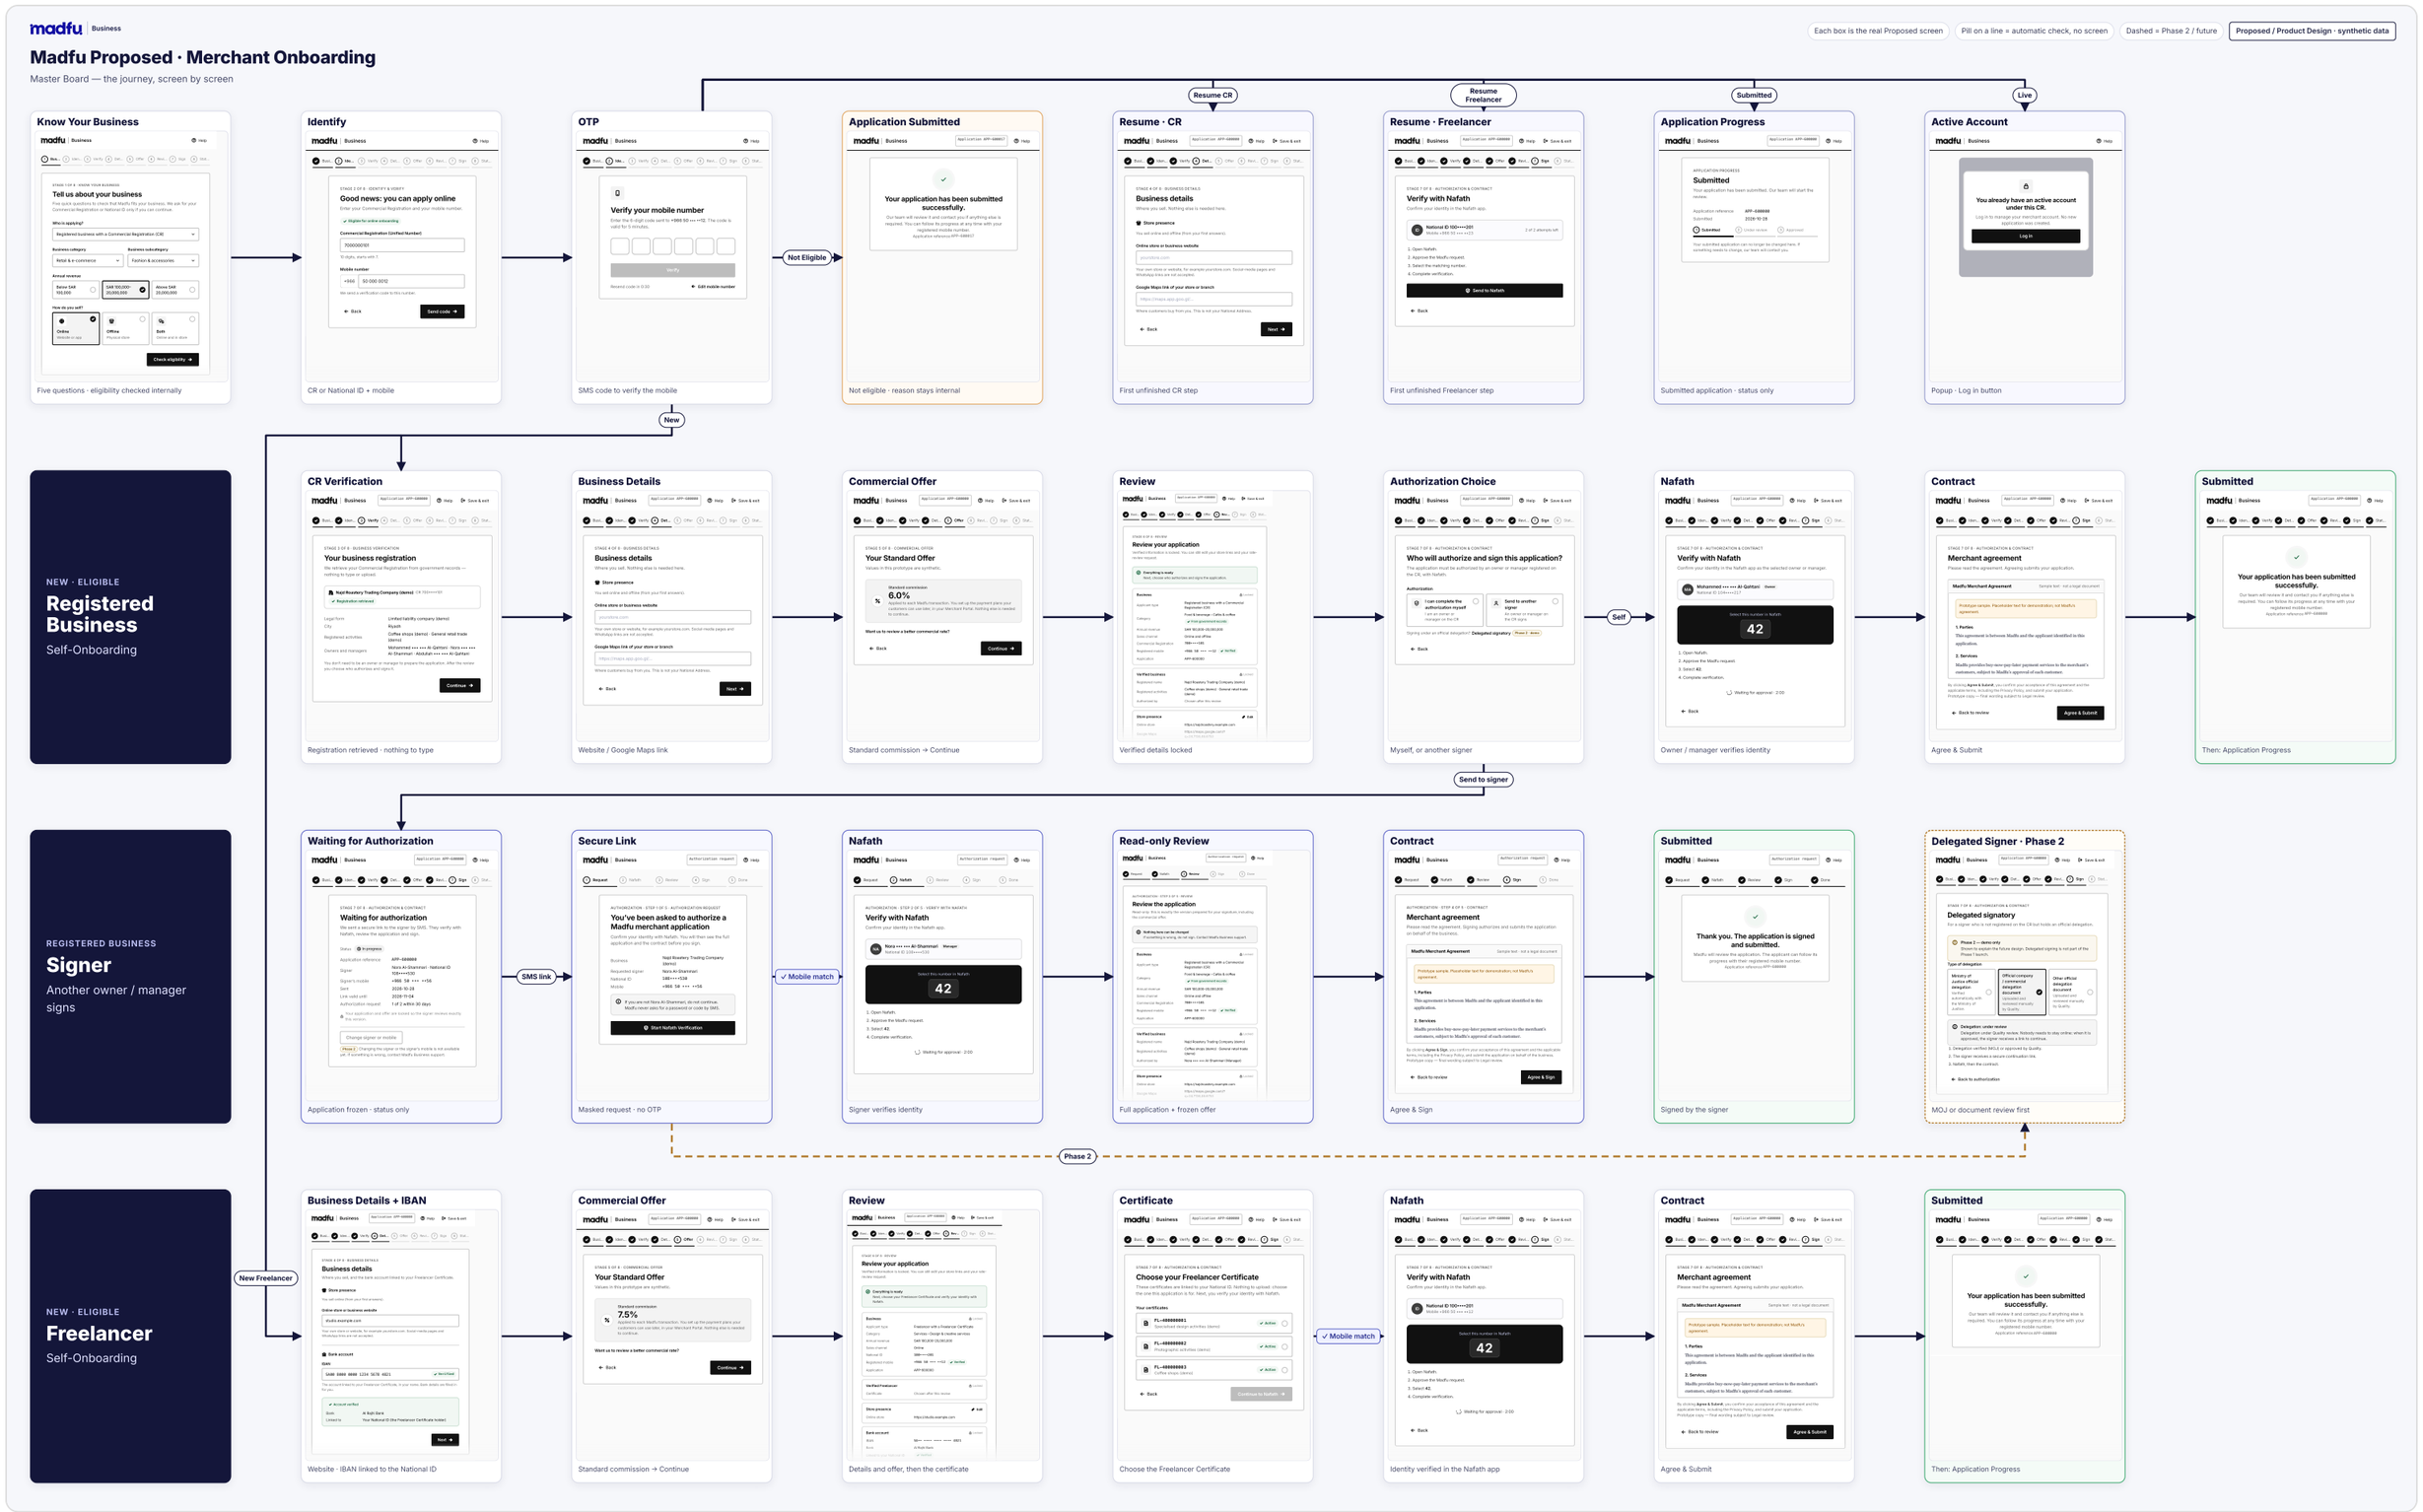

Principles

1. **Ask cheaply first, verify expensively later.** Five Page-1 answers decide eligibility internally before any identity, OTP or paid check; an internal existence check runs before the code.
2. **No automatic rejection on screen.** Not Eligible is internal: the applicant sees Application submitted / Under review and the team explains the reason personally.
3. **Access belongs to the stored mobile.** Merchant entity, application and user are separate: an existing application or account opens only with a code to its stored mobile; a new mobile never takes over.
4. **Lifecycle and authorization first.** A returning applicant is routed by status: draft → resume, awaiting authorization → status, submitted → Application Progress, live → active-account popup.
5. **One direction, one version.** A CR signer reviews and signs exactly the frozen application and offer, after Nafath; no send-back loop; versions are tracked on the same application.
6. **Never repeat a paid verification unnecessarily.** Successful checks are reused; the Freelancer certificate comes after Review and before Nafath; resume normally costs one OTP.
7. **Hard rules and risk are separate.** Hard rules capture internally; CR age and other factors only score risk in the backend.

Master Board

Proposed / Product Design

The journey, screen by screen. Full-size version: Madfu_Proposed_Simple_Master_Board.pdf.

Proposed / Product Design

Confirmed product decisions

28 Oct 2026

1. Eight target workflows: New Eligible CR Merchant · New Eligible Freelancer · Not Eligible Application · Existing In-Progress CR Merchant — Resume · Existing In-Progress Freelancer — Resume · Submitted Application · Existing Live Merchant · CR Merchant Signer Flow. Sub-cases sit inside them.
2. Shared start for everyone: Know Your Business / Eligibility → Identification → OTP; then routing by the application lifecycle AND the authorization state.
3. Know Your Business (one page) asks only applicant type (Registered Business with CR / Freelancer with Certificate / Freelancer without Certificate), category, subcategory, annual revenue and sales channel (online / offline / both) — no website or Google Maps link.
4. Eligibility has two INTERNAL outcomes, Eligible and Not Eligible. Not Eligible is never shown: no "Rejected", "Blacklisted", "Blocked", "Not eligible" or reason on any merchant screen.
5. Not Eligible applicants (Freelancer without certificate, unsupported / regulated category, CR-only activity, channel, IBAN not linked, no certificate found, regulated CR activity, no owner / manager on the CR) are treated as leads: Identify + OTP, the application is captured with the internal reason, and the merchant sees "Application submitted" (later "Under review"). The team contacts them and explains the reason manually. No paid check runs after capture.
6. Annual revenue is collected but never routes: every band (below SAR 100,000, SAR 100,000–20,000,000, above SAR 20,000,000) self-onboards when otherwise eligible. Revenue is a risk input only.
7. An internal existence check runs before any OTP; it calls no provider.
8. Existing applications and accounts are opened only by an OTP to their STORED mobile (last three digits shown). A different mobile entered on Page 2 is never used, cannot be switched to and cannot take over an in-progress application.
9. Resume does not create a new application and does not restart: it opens the first unfinished stage; completed, verified steps stay locked / reused. CR and Freelancer resume are separate workflows because their steps differ.
10. Submitted applications (and internally Not Eligible ones) open Application Progress after the code; they never reopen Review, Contract or submission.
11. Existing live merchant: a popup "You already have an active account under this CR." with a "Log in" button; nothing navigates until the merchant clicks. No application is created.
12. Registered business: CR Verification / CR data → Business Details → Commercial Offer → Review → Authorization choice → (self) Nafath → Contract → Submitted, or Signer Handoff. The preparer is never asked to pick an owner / manager earlier only for signing, and is not asked whether they are an owner / manager on Page 2.
13. Freelancer: Business Details → Commercial Offer → Review → Certificate list / selection → mobile ↔ National ID → Nafath → Contract → Submitted — the same shape as a registered business, with the certificate as the final authority step (CR: owner / manager authorization). The certificate is chosen after Review and BEFORE Nafath; the retrieval is also the cost check (no certificate → no Nafath). Freelancers declare "Is your IBAN linked to your Freelancer Certificate?" on Page 2.
14. CR IBAN, VAT and number of branches are not required in onboarding. Freelancer IBAN stays required and must be linked to the Freelancer Certificate.
15. Website / Google Maps are asked in Business Details by sales channel (online → website · offline → Google Maps · both → both). National Address is separate and not a store-presence substitute.
16. Commercial Offer belongs to the preparer and comes before the authorization choice: standard terms / rate → Continue, optional low-priority better-rate review. No payment-plan configuration, no 6 / 9 / 12-month selection. The signer can never modify it.
17. After Review the CR preparer chooses: "I can complete the authorization myself" (select yourself among the owners / managers → mobile ↔ National ID → Nafath → Contract) or "Send to another signer".
18. Send to another signer: select one owner / manager on the CR + enter their primary Nafath mobile → Send Authorization. This creates an authorization version, freezes the application and the Commercial Offer, makes them read-only for the preparer, sends a secure SMS link and opens the preparer's Authorization status page.
19. Preparer after a handoff: status only, from configurable statuses (displayed as In progress / Approved / Expired / Not completed). No edit; no signer or mobile change in Phase 1.
20. Signer: Secure SMS link → masked Signer confirmation (business, first + last name, masked National ID and mobile) → Start Nafath Verification (mobile ↔ National ID first) → Nafath → full read-only Review (application + frozen offer) → Contract → Agree & Sign → Submitted. No signer OTP in Phase 1; the link alone authorizes nothing and never exposes the application; Nafath runs again in every signer session.
21. Signer review is read-only and one-directional: no edit, no send-back, no request-changes loop.
22. Handoff validity: 7 days by default, configurable. Each version stores created / expiry timestamps, status and version number. When expired: the link stops working, the application stays saved, nothing disappears, no duplicate application is created.
23. No blanket 30-day CR lock. At most 2 signer handoffs (authorization versions) of the SAME application within any 30-day window; a further one needs an internal / manual unlock. Versions are

Proposed / Product Design

Phase 1 vs Phase 2

PHASE 1

- Core CR and Freelancer onboarding (shared KYB → Identify → OTP)
- Not Eligible captured internally; merchant sees Application submitted / Under review
- Resume (CR and Freelancer) with the stored mobile only
- Submitted application → Application Progress
- Live merchant popup with a Log in button
- CR Authorization choice: self authorization or signer handoff
- Signer secure SMS link — no signer OTP
- Nafath before the signer sees the full application; read-only signer review
- Application + Commercial Offer freeze at handoff
- 7-day configurable handoff validity
- Maximum 2 handoff versions within 30 days (then internal unlock)
- No preparer signer / mobile change after the handoff starts
- No send-back / request-changes loop

PHASE 2 / FUTURE

- Change signer or signer mobile after a handoff (revoke the old link, new version, new link)
- Resend / revoke workflow
- Delegated signer production implementation
- Ministry of Justice delegation integration
- Manual delegation Quality-review workflow
- Low-priority "change to another owner / manager / signatory" option
- Any more advanced signer workflow (multiple signers, send-back)

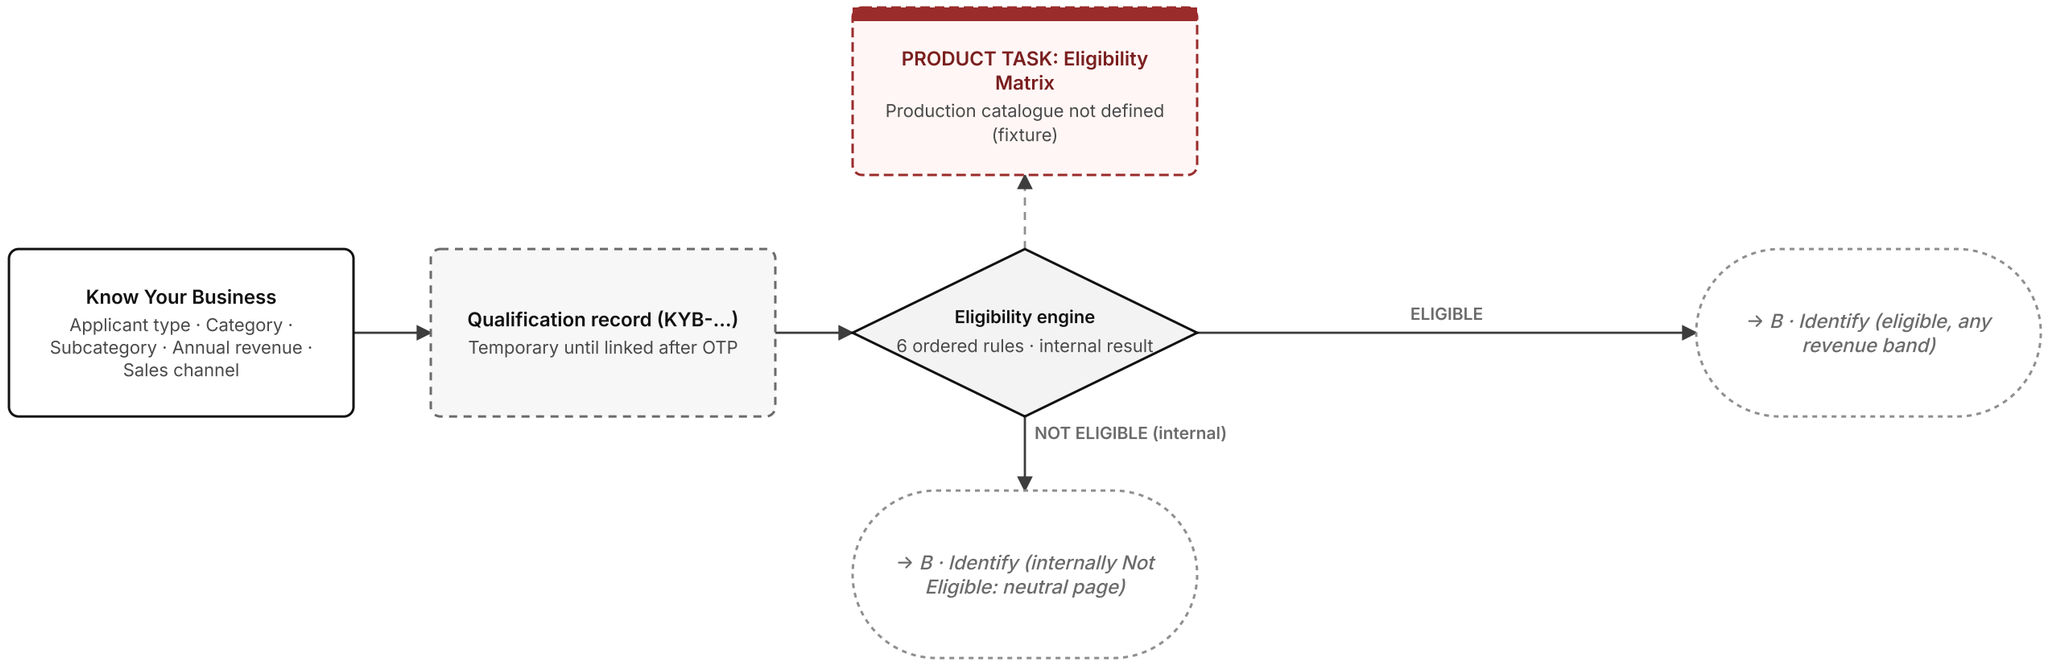

Proposed / Product Design

A · Know Your Business (Page 1): Eligible or Not Eligible — internal only

No identity, mobile, OTP or URL. Two internal outcomes; nothing is shown and everyone continues to Identify. Revenue is collected but never routes (risk input only). The declared category is replaced by the government activity once retrieved.

Merchant-facing step · Decision · Backend / internal step · External / provider call · Reused / locked result · Manual / paused route · Outcome · Open decision

Fallback / reuse / loop

Removed: any Page-1 stop, Not Eligible pages and reasons shown to applicants, Sales-lead / Blocked / revenue routes. Website and Maps links are in Business Details.

Know Your Business

Five questions. No CR, National ID, mobile, OTP or URL. Eligibility is decided internally and never shown.

Proposed / Product Design

Proposed / Product Design

B · Identifier + mobile, existence check, OTP and routing

Everyone reaches Page 2. An internal lookup decides where the code goes. Existing records open only with their STORED mobile — a different entered mobile is never used. Routing reads the application lifecycle and the authorization state, never completion alone.

Merchant-facing step · Decision · Backend / internal step · External / provider call · Reused / locked result · Manual / paused route · Outcome · Open decision

Fallback / reuse / loop

Proposed / Product Design

Identifier + mobile (registered business)

CR + mobile. No owner / manager question: authorization is chosen after Review. An internal existence check runs on Send code.

Proposed / Product Design

I · Authorization choice and signer handoff (registered business, Phase 1)

After Review the preparer authorizes personally or sends the application to another owner / manager on the CR. A handoff creates an authorization VERSION of the same application, freezes data and offer, and sends a secure SMS link valid 7 days (configurable). Max 2 versions in 30 days — no blanket CR lock.

Merchant-facing step · Decision · Backend / internal step · External / provider call · Reused / locked result · Manual / paused route · Outcome · Open decision · Fallback / reuse / loop

Phase 1: no signer / mobile change after the handoff starts; no send-back or edit loop; the preparer sees status only.

Proposed / Product Design

Who will authorize and sign?

After Review: myself, or send to another signer. Delegated signatory shown as Phase 2.

madfu | Business

Signing under an official delegation? **Delegated signatory** Phase 2 · demo

← Back

Proposed / Product Design

Delegated signatory (Phase 2 demo)

MOJ delegation or document review before Nafath. Not Phase 1 behaviour.

madfu | Business

Application APP-600000

Help

Save & exit

Business · Identify · Verify · Details · Offer · Review · 7 Sign · 8 Status

STAGE 7 OF 8 · AUTHORIZATION & CONTRACT

Delegated signatory

For a signer who is not registered on the CR but holds an official delegation.

Phase 2 — demo only
Shown to explain the future design. Delegated signing is not part of the Phase 1 launch.

Type of delegation

Ministry of Justice official delegation
Verified automatically with the Ministry of Justice.

Official company / commercial delegation document
Uploaded and reviewed manually by Quality.

Other official delegation document
Uploaded and reviewed manually by Quality.

1. Delegation verified (MOJ) or approved by Quality.
2. The signer receives a secure continuation link.
3. Nafath, then the contract.

← Back to authorization

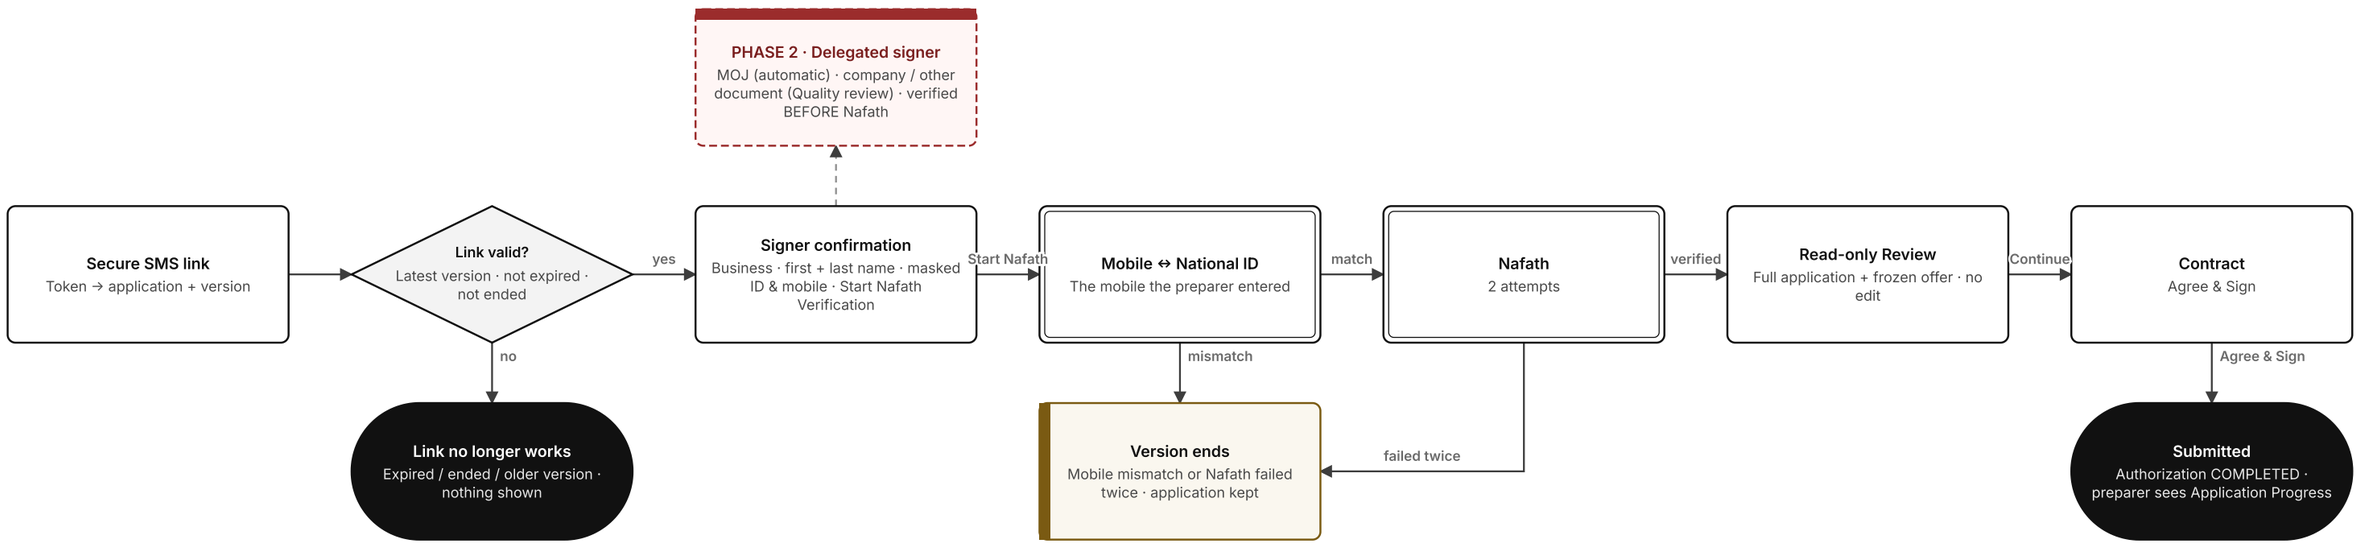

Proposed / Product Design

J · CR signer: secure link → Nafath → read-only Review → Contract

No signer OTP in Phase 1, and the link alone authorizes nothing: the first page shows only masked context. Nafath is the strong identity step and runs again in every signer session; only then is the full application shown. One direction only.

Merchant-facing step · Decision · Backend / internal step · External / provider call · Reused / locked result · Manual / paused route · Outcome · Open decision

Fallback / reuse / loop

Phase 1: no send-back, request-changes or edit loop. The signer cannot modify the application or the offer.

Proposed / Product Design

Signer: secure link

No OTP. Masked request only — business, first + last name, masked ID and mobile. Nothing else before Nafath.

madfu | Business

Authorization request

Help

Request — Nafath — Review — Sign — Done

Thank you. The application is signed and submitted.

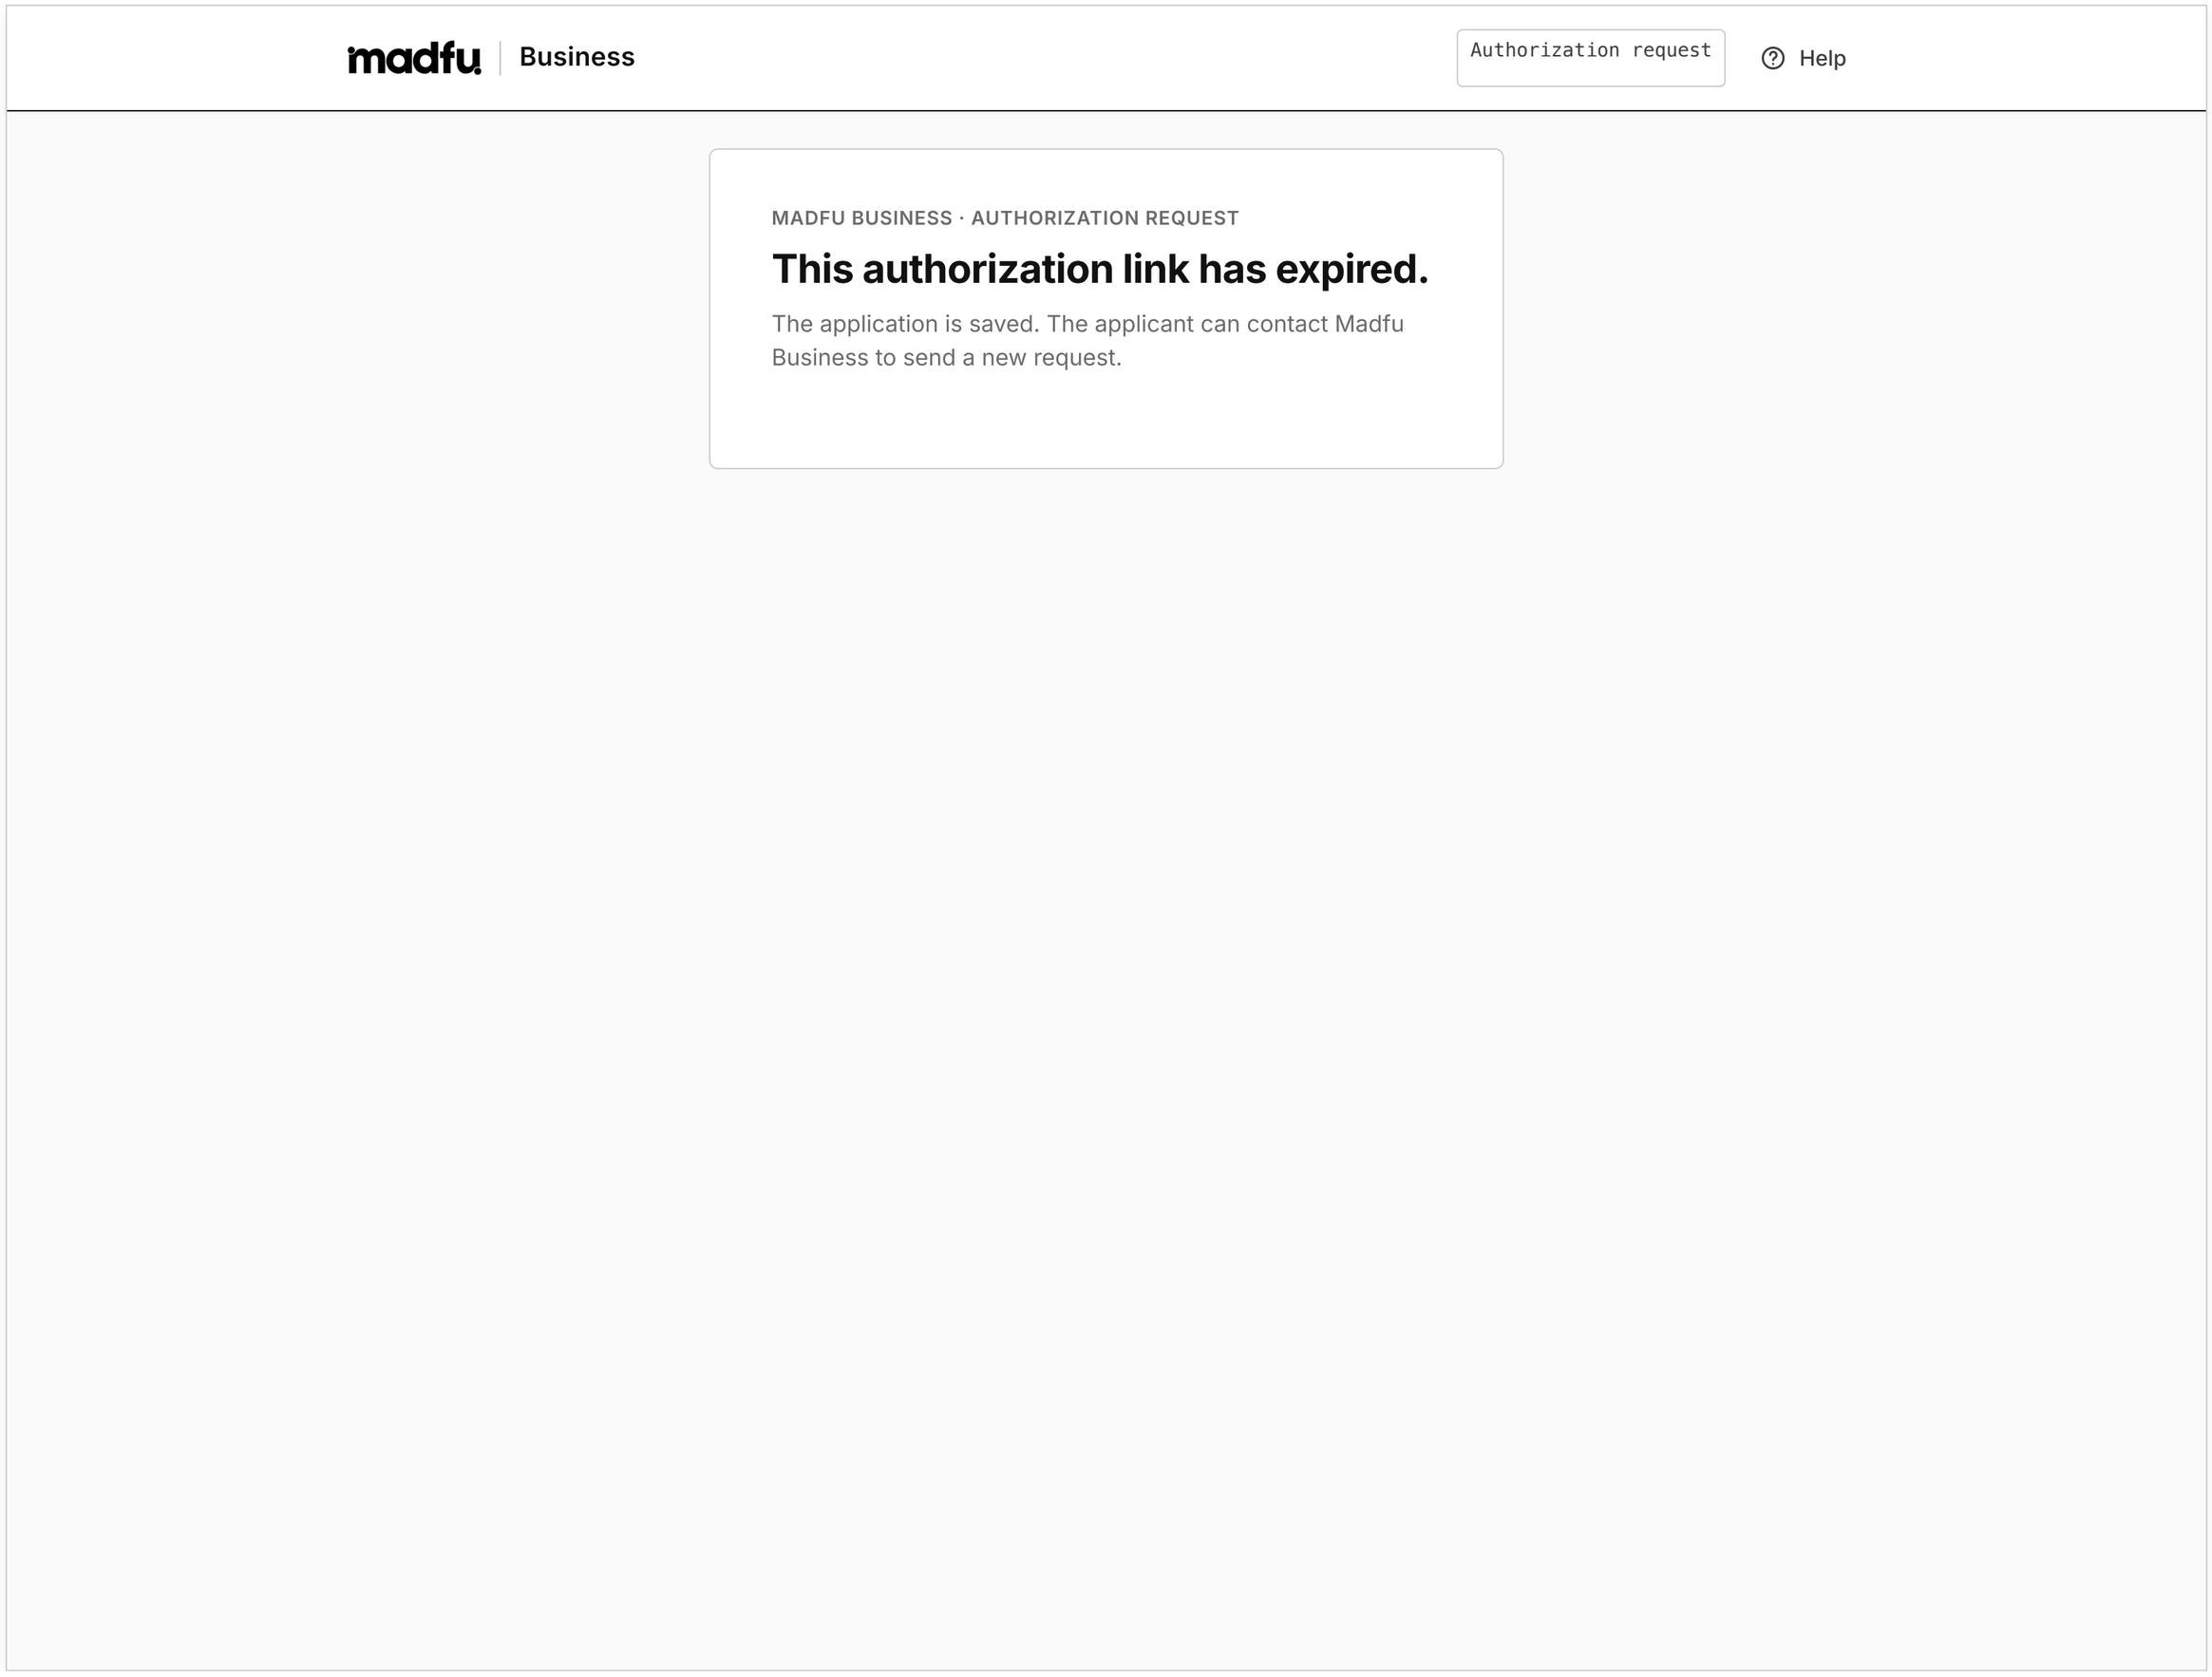

Madfu will review the application. The applicant can follow its progress with their registered mobile number.

Application reference APP–600000

Proposed / Product Design

Signer: expired link

The link no longer works; nothing about the application is shown.

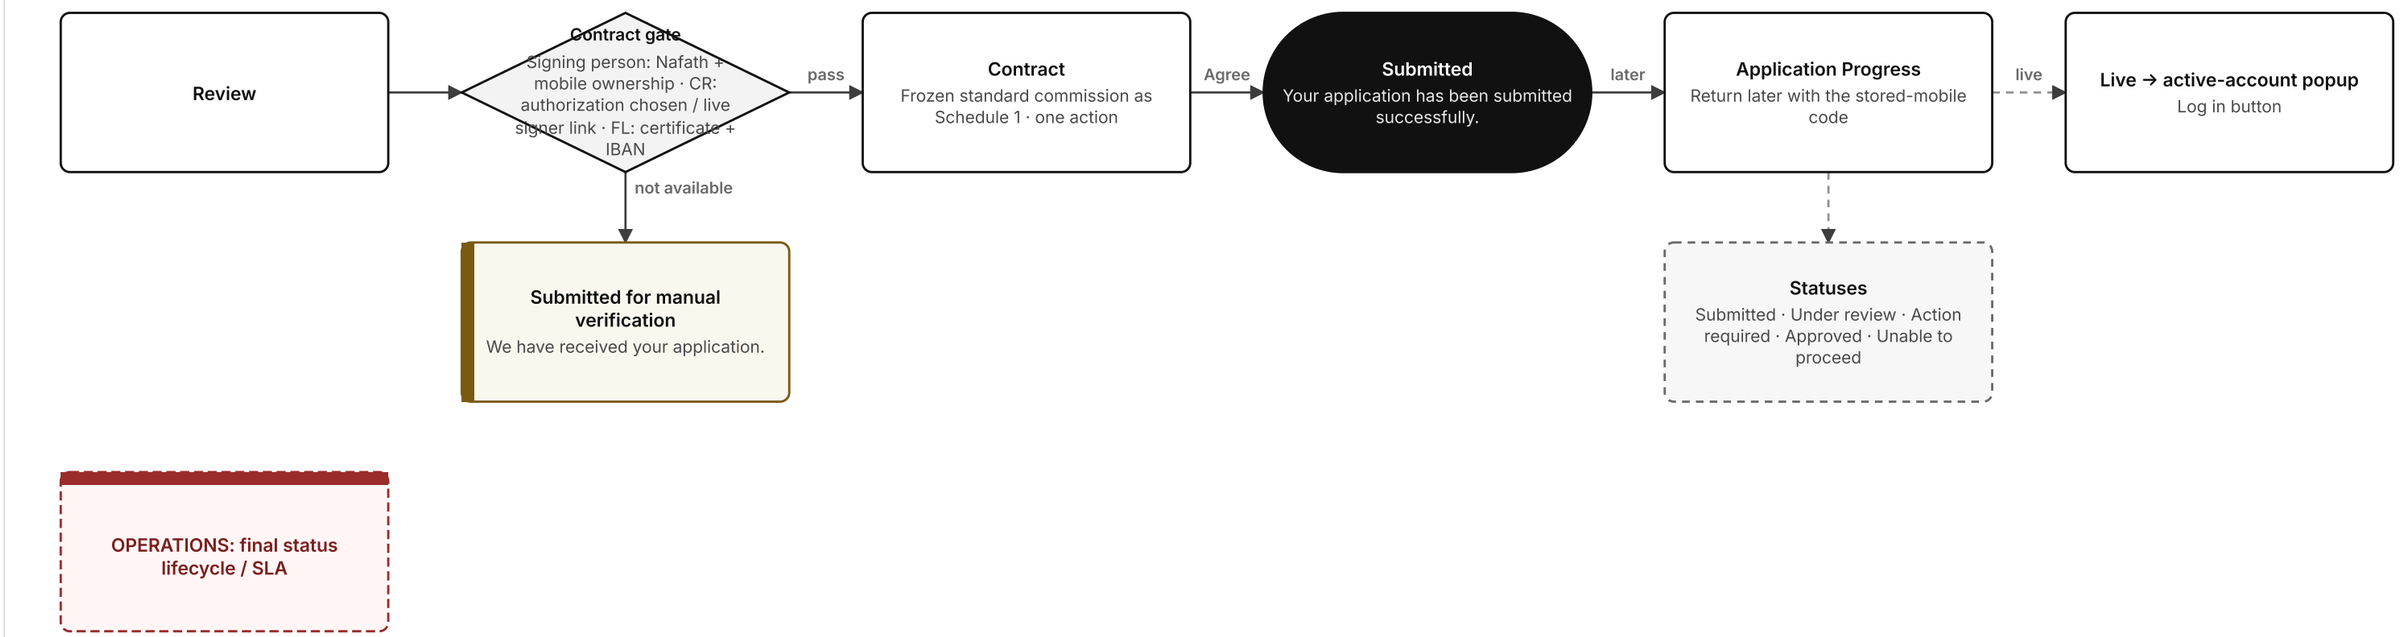

Proposed / Product Design

K · Contract, submission and Application Progress

Back to Review, or one action: Agree & Submit (preparer) / Agree & Sign (signer) records acceptance and submits (no Decline). A submitted application opens Application Progress — never Review, Contract or a second submission. No activation is claimed before it happens.

Merchant-facing step · Decision · Backend / internal step · External / provider call · Reused / locked result · Manual / paused route · Outcome · Open decision · Fallback / reuse / loop

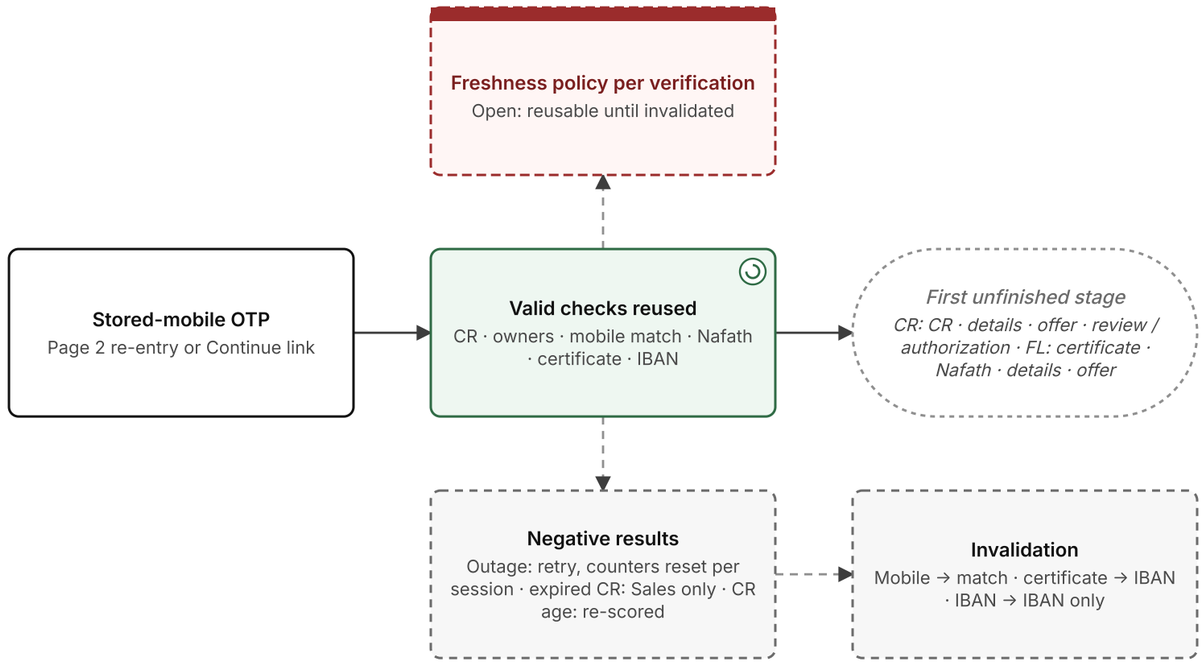

Proposed / Product Design

L · Resume, reuse, invalidation and freshness

Ordinary resume costs one OTP to the stored mobile and opens the first unfinished CR or Freelancer step. Positive results are reused until a dependency changes; negative and technical results follow a policy per result type.

Merchant-facing step · Decision · Backend / internal step · External / provider call · Reused / locked result · Manual / paused route · Outcome · Open decision · Fallback / reuse / loop

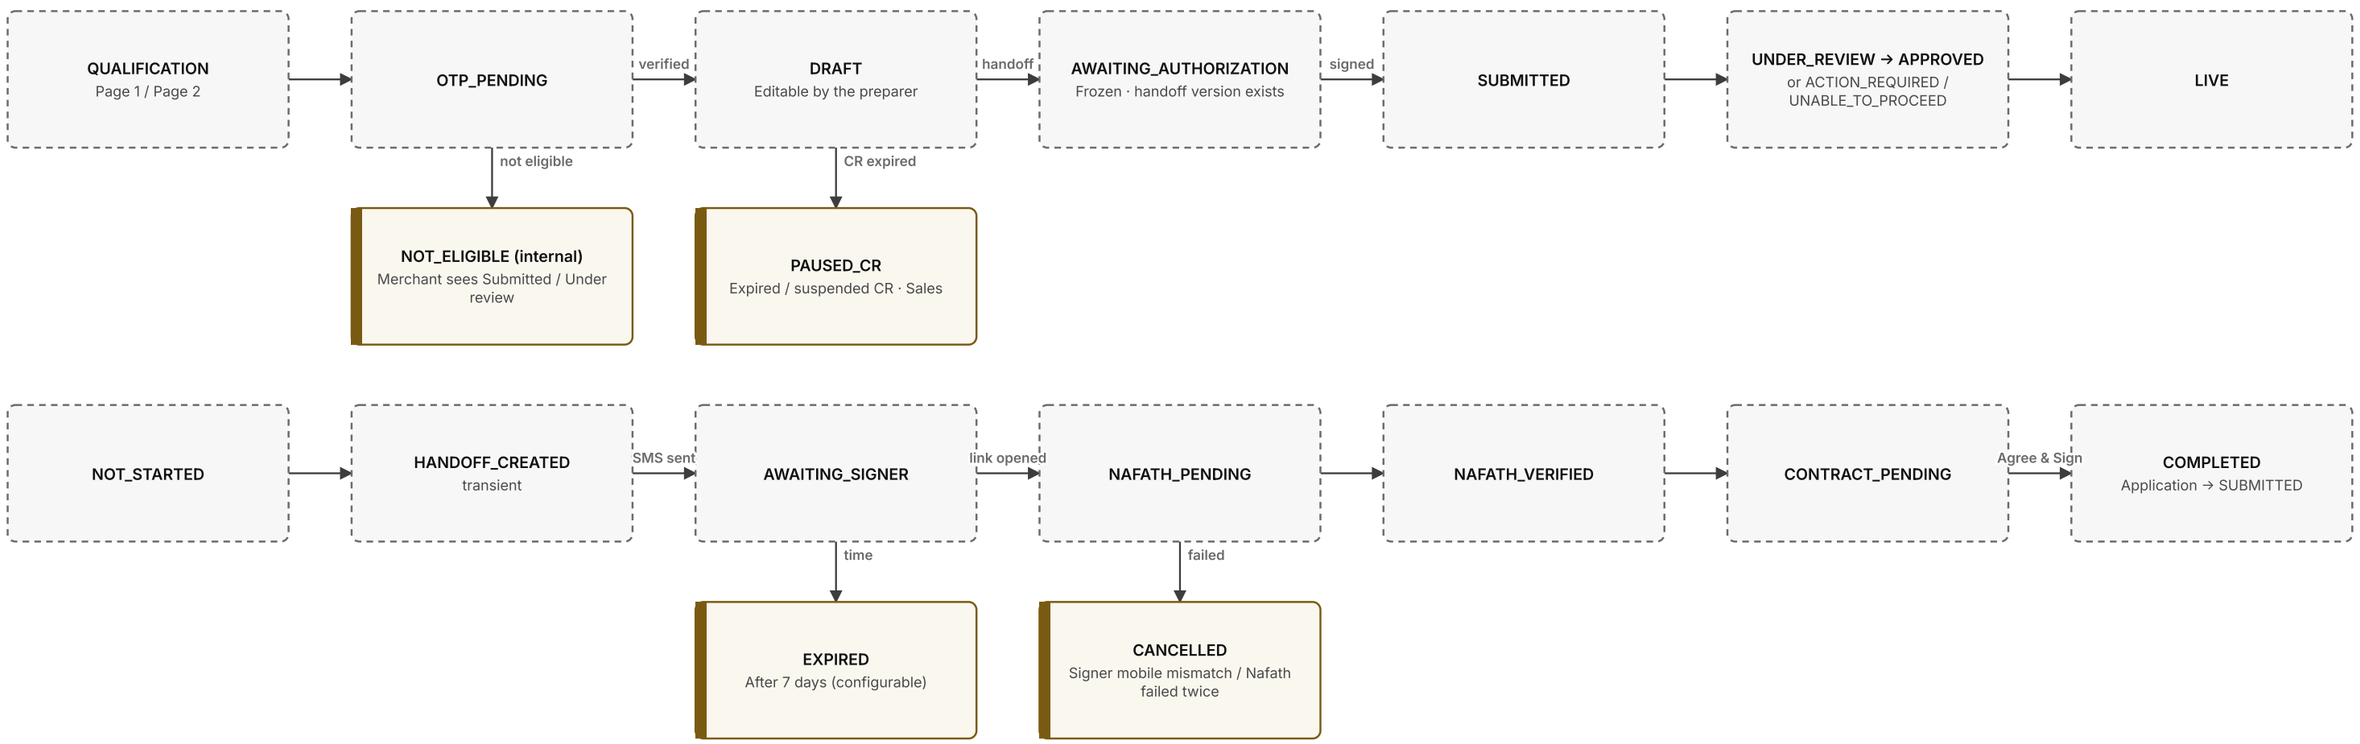

Proposed / Product Design

M · Two lifecycles: application vs authorization · Phase 1 vs Phase 2

Routing reads BOTH: the application lifecycle (top) and the CR authorization lifecycle (bottom). Completing the authorization submits the application. Not Eligible is an internal application state; the merchant sees Submitted / Under review.

Merchant-facing step · Decision · Backend / internal step · External / provider call · Reused / locked result · Manual / paused route · Outcome · Open decision

Fallback / reuse / loop

PHASE 1: CR / Freelancer onboarding · resume · submitted · live popup · CR signer handoff · secure link · no signer OTP · Nafath before signer review · freeze · 7-day configurable link · max 2 versions / 30 days · no signer / mobile change · no send-back loop

PHASE 2 / FUTURE: change signer / mobile · resend / revoke · delegated signer (MOJ integration, Quality manual review) · signer-change option · advanced signer workflows

Proposed / Product Design

Contract

One action: Agree & Submit. Standard commission only; no plans.

Proposed / Product Design

Phase 1 vs Phase 2

Phase	Scope
PHASE 1	Core CR and Freelancer onboarding (shared KYB → Identify → OTP)
PHASE 1	Not Eligible captured internally; merchant sees Application submitted / Under review
PHASE 1	Resume (CR and Freelancer) with the stored mobile only
PHASE 1	Submitted application → Application Progress
PHASE 1	Live merchant popup with a Log in button
PHASE 1	CR Authorization choice: self authorization or signer handoff
PHASE 1	Signer secure SMS link — no signer OTP
PHASE 1	Nafath before the signer sees the full application; read-only signer review
PHASE 1	Application + Commercial Offer freeze at handoff
PHASE 1	7-day configurable handoff validity
PHASE 1	Maximum 2 handoff versions within 30 days (then internal unlock)
PHASE 1	No preparer signer / mobile change after the handoff starts
PHASE 1	No send-back / request-changes loop
PHASE 2 / FUTURE	Change signer or signer mobile after a handoff (revoke the old link, new version, new link)
PHASE 2 / FUTURE	Resend / revoke workflow
PHASE 2 / FUTURE	Delegated signer production implementation
PHASE 2 / FUTURE	Ministry of Justice delegation integration
PHASE 2 / FUTURE	Manual delegation Quality-review workflow
PHASE 2 / FUTURE	Low-priority "change to another owner / manager / signatory" option
PHASE 2 / FUTURE	Any more advanced signer workflow (multiple signers, send-back)

Proposed / Product Design

Stages

#	Stage	Screens
1	Know Your Business	kyb
2	Identify & Verify	identify · otp
3	Business Verification	cr · certificates · nafath
4	Business Details	business
5	Commercial Offer	commercial
6	Review	review
7	Authorization & Contract	authorize · handoff · delegation · signer · contract
8	Submit / Application Status	outcome · status · login

Registered business: Nafath is part of stage 7 (after the Authorization choice). Freelancer: Nafath is part of stage 3 (after the certificate). The signer has a short own stepper: Request · Nafath · Review · Sign · Done.

Proposed / Product Design

Page 1 → Page 2 → existence check → OTP → routing

Situation	OTP sent to	After the code
New identifier, internally Not Eligible (any reason)	Entered mobile	Application captured with the internal reason → "Application submitted"; no paid check; team contacts the applicant
New identifier, eligible Freelancer, IBAN linked = No	Entered mobile	Captured internally (FL_IBAN_NOT_LINKED) → "Application submitted"
New identifier, eligible registered business (any revenue band)	Entered mobile	Application created (DRAFT) → CR Verification
New identifier, eligible Freelancer with certificate (any revenue band)	Entered mobile	Application created (DRAFT) → Business Details (certificate after Review)
Incomplete application (DRAFT), any entered mobile	STORED application mobile (•••••••123) — never the entered one	Resume at the first unfinished CR / Freelancer step; valid checks reused
Awaiting authorization (handoff exists)	Stored application mobile	Authorization status page (frozen, status only)
Submitted, not live	Stored application mobile	Application Progress (status only)
Captured as internally Not Eligible	Stored mobile	Application Progress — "Under review"; no reason
Paused (CR expired / suspended)	Stored application mobile	Saved; Sales will help you continue
Live merchant	Stored account mobile	Popup "You already have an active account under this CR." → Log in (on click only)
Code not completed	—	No access; nothing exposed; no new application

There is no Sales-lead route and no merchant-facing Not Eligible page. Throttled after 5 Page-2 submissions per session (simulated rate limit / bot challenge).

Proposed / Product Design

Application lifecycle → where the application opens (preparer)

Status	Meaning	Opens at
QUALIFICATION	Qualification (Page 1 / Page 2) — no application yet	Page 1 / Page 2 (nothing persisted)
OTP_PENDING	OTP pending — no application yet	OTP screen
DRAFT	Draft application (self-onboarding in progress)	First unfinished stage (CR: … review / authorization; FL: certificate / Nafath / …)
AWAITING_AUTHORIZATION	Awaiting authorization — application frozen, signer handoff exists	Authorization status page (or the self-authorization Nafath / Contract after a new version)
NOT_ELIGIBLE	Not Eligible (INTERNAL) — merchant sees Application submitted / Under review; team contacts them	Application Progress — "Under review" (internal state)
PAUSED_CR	Paused — CR expired / suspended; saved and handed to Sales	Sales / manual follow-up message
SUBMITTED	Submitted	Application Progress
UNDER_REVIEW	Under review	Application Progress
ACTION_REQUIRED	Action required	Application Progress
APPROVED	Approved (not yet live)	Application Progress
UNABLE_TO_PROCEED	Unable to proceed	Application Progress
LIVE	Live merchant (account exists)	Active-account popup → Log in

Routing reads the lifecycle first, then the authorization status; only a DRAFT is routed by completion. Merchant entity (CR / National ID), Application and User / mobile are separate: knowing the CR never grants access.

Proposed / Product Design

Authorization lifecycle (separate from the application lifecycle)

Status	Meaning	Preparer sees (configurable)
NOT_STARTED	Authorization not chosen yet (or a draft choice)	Not started — Not started
HANDOFF_CREATED	Version record created, SMS not yet sent (transient)	In progress — Handoff created
AWAITING_SIGNER	Secure link sent; signer has not verified	In progress — Awaiting signer
NAFATH_PENDING	Signer (or self-authorizing preparer) started Nafath	In progress — Nafath pending
NAFATH_VERIFIED	Identity verified with Nafath	In progress — Nafath verified
CONTRACT_PENDING	Contract opened, not yet signed	In progress — Contract pending
COMPLETED	Signed → application SUBMITTED	Approved — Completed
EXPIRED	No signature within 7 days; link dead; application kept	Expired — Expired
CANCELLED	Signer mobile mismatch or Nafath failed twice; application kept	Not completed — Cancelled

The final preparer status list is not defined yet (OD-17): display buckets live in configuration (copy.ts PREPARER_AUTH_VIEW).

Proposed / Product Design

Signer handoff rules (Phase 1, configurable in config.ts HANDOFF_RULES)

Rule	Value / behaviour
Who can be the signer	One individual owner / manager registered on the CR (delegates: Phase 2)
What the preparer enters	The signer (from the CR list) + the signer's primary Nafath mobile
Link validity	7 days (expiryDays, default 7)
Versions per application	Max 2 (maxVersions) within 30 days (windowDays); then internal / manual unlock
On expiry	Link stops working · application stays saved · no duplicate application · a new version may start (within the limit)
Per version, stored	Application ID · version · signer · masked signer mobile · created / expiry · status · initiated by · end reason · completion timestamp · frozen snapshot
Freeze	Application data, Commercial Offer, CR / business details, onboarding answers — from the first handoff
Preparer after sending	Status only; no edit; no signer / mobile change (Phase 2)
Signer entry	Secure link → masked confirmation → mobile ↔ National ID → Nafath → read-only Review → Contract (no OTP)
Signer failures	Mobile mismatch or Nafath failed twice → version CANCELLED; application kept

Proposed / Product Design

Page 1 preliminary eligibility rules (ordered, KYB-RULES-v6-demo (2026-10-28))

Rule	Condition	Result (internal)	Reason code	Type
KYB-R01	Freelancer without a Freelancer Certificate	NOT_ELIGIBLE	FL_CERT_REQUIRED	business
KYB-R02	Category not supported (blacklisted)	NOT_ELIGIBLE	CATEGORY_NOT_SUPPORTED	business
KYB-R03	Regulatory prohibition for this applicant type	NOT_ELIGIBLE	REGULATORY_RESTRICTION	regulatory
KYB-R04	Activity requires a CR and the applicant is a Freelancer	NOT_ELIGIBLE	ACTIVITY_REQUIRES_CR	regulatory
KYB-R05	Freelancer category allowed online only, applicant sells offline	NOT_ELIGIBLE	CHANNEL_NOT_SUPPORTED	business
KYB-R06	Everything else, any revenue band: eligible for self-onboarding	ELIGIBLE	OK	internal

First matching rule wins. Internal, before any external call, never shown. Every result continues to Identify + OTP. Revenue (bands at SAR 100,000 / SAR 20,000,000) is collected but no rule reads it — it is a risk input. Production Eligibility Matrix: PRODUCT TASK.

Proposed / Product Design

Category rules (synthetic fixture catalogue)

Madfu subcategory	Registered business	Freelancer
Retail & e-commerce › Fashion & accessories	Allowed	Allowed
Retail & e-commerce › Electronics	Allowed	Freelancer online only
Retail & e-commerce › Gold & jewellery (example)	Regulatory prohibition	Regulatory prohibition
Food & beverage › Cafés & coffee	Allowed	Requires a CR
Food & beverage › Home-made food	Allowed	Freelancer online only
Services › Design & creative services	Allowed	Allowed
Services › Photography	Allowed	Allowed
Services › Business consulting	Allowed	Allowed
Fixture examples (demo rules) › Example: unsupported (blacklisted) category	Not supported (blacklisted)	Not supported (blacklisted)

A category is allowed or (internally) not eligible; there is no manual-review category route. Example only (e.g. gold & jewellery).

Proposed / Product Design

Government CR rules — hard (GOV-CR-v4-demo (2026-10-27))

Check	Condition	Action
CR status	ACTIVE	continue
CR status	EXPIRED	saved + Sales recovery (CR_EXPIRED)
CR status	SUSPENDED	saved + Sales recovery (CR_SUSPENDED)
CR status	RESTRICTED	saved + Sales recovery (CR_RESTRICTED)
CR age	any	No hard rule: risk attribute (see risk model)
National Address	Missing / expired	continue + flag
Legal entity	NON_SAUDI	continue + "additional documents required" (collected later)

RESTRICTED follows the Sales route provisionally; the Not Eligible inventory is open.

Proposed / Product Design

Not Eligible rules (internal) and the paused CR route — separate from the risk score

Reason	Where	Source	Route
FL_CERT_REQUIRED	Page 1	Applicant type	Identify → OTP → Internal Not Eligible → merchant sees Application submitted; team contacts them · no paid check
CATEGORY_NOT_SUPPORTED	Page 1 (declared) and after retrieval (verified)	Eligibility Matrix	Identify → OTP → Internal Not Eligible → merchant sees Application submitted; team contacts them · no paid check
REGULATORY_RESTRICTION	Page 1	Eligibility Matrix (regulatory)	Identify → OTP → Internal Not Eligible → merchant sees Application submitted; team contacts them · no paid check
ACTIVITY_REQUIRES_CR	Page 1 / certificate activity	Eligibility Matrix (regulatory)	Identify → OTP → Internal Not Eligible → merchant sees Application submitted; team contacts them · no paid check
CHANNEL_NOT_SUPPORTED	Page 1	Eligibility Matrix	Identify → OTP → Internal Not Eligible → merchant sees Application submitted; team contacts them · no paid check
ACTIVITY_REGULATED	After CR / certificate retrieval	Government activity mapping	Internal Not Eligible → merchant sees Application submitted; team contacts them · no further paid check
NO_OWNER_MANAGER_ON_CR	After CR people retrieval	Government associated parties	Internal Not Eligible → merchant sees Application submitted; team contacts them · nobody on the CR can authorize in V1
FL_IBAN_NOT_LINKED	Page 2 declaration (after OTP)	Applicant declaration	Internal Not Eligible → merchant sees Application submitted; team contacts them · no paid check
FL_CERT_NOT_FOUND	Certificate retrieval (before Nafath)	Freelance platform	Internal Not Eligible → merchant sees Application submitted; team contacts them · no Nafath call
CR_EXPIRED	After CR retrieval	Government CR status	Paused: saved application + Sales recovery
CR_SUSPENDED	After CR retrieval	Government CR status	Paused: saved application + Sales recovery
CR_RESTRICTED	After CR retrieval	Government CR status (provisional)	Paused: saved application + Sales recovery

A regulatory or business Not Eligible rule is never converted into a score to let a merchant continue. Revenue is never a Not Eligible rule. No Not Eligible reason is ever shown to the merchant.

Proposed / Product Design

Backend risk model (RISK-v1-demo (2026-10-27), synthetic)

Factor	Values → demo points
CR age	Under 12 months: 3 · 12–24 months: 2 · Over 24 months: 1
Declared revenue	BELOW_100K: 2 · MID_BAND: 1 · ABOVE_20M: 0
Verified category group	retail: 2 · food: 1 · services: 1 · fixture: 1
Entity	SAUDI: 0 · NON_SAUDI: 2
National Address	VALID: 0 · MISSING: 1 · EXPIRED: 1
Not modelled	Fraud signals · Credit signals · Compliance / screening signals
Level	LOW < 4 ≤ MEDIUM < 7 ≤ HIGH
Decision (illustrative)	LOW → PROCEED_FULLY · MEDIUM → PROCEED_CONTROLLED · HIGH → HOLD

Backend only; never shown to the merchant; never rejects on its own; no production weights or thresholds invented. Production factors, weights, thresholds and decision effects: RISK DECISION.

Proposed / Product Design

Government activity → Madfu category (ACT-MAP-v4-demo (2026-10-27))

Government activity	Madfu subcategory
ACT-4771 · Retail sale of clothing (demo)	Retail & e-commerce › Fashion & accessories
ACT-4772 · Retail sale of footwear and leather goods (demo)	Retail & e-commerce › Fashion & accessories
ACT-4741 · Retail sale of electronic equipment (demo)	Retail & e-commerce › Electronics
ACT-4777 · Retail sale of gold and jewellery (demo)	Retail & e-commerce › Gold & jewellery (example)
ACT-5630 · Coffee shops (demo)	Food & beverage › Cafés & coffee
ACT-5610 · Restaurants and cafés (demo)	Food & beverage › Cafés & coffee
ACT-1079 · Home food production (demo)	Food & beverage › Home-made food
ACT-7410 · Specialised design activities (demo)	Services › Design & creative services
ACT-7420 · Photographic activities (demo)	Services › Photography
ACT-7020 · Management consultancy (demo)	Services › Business consulting
ACT-4719 · General retail trade (demo)	Not mapped
ACT-9999 · Activity not in the mapping (demo)	Not mapped

Many-to-one. A CR carries several activities. Demo reconciliation: a regulated activity blocks (internally); an activity matching the declaration confirms it; otherwise the primary mapped activity reclassifies; nothing mapped keeps the declaration provisionally (internal flag). Final mapping and multi-activity rules: open.

Proposed / Product Design

External-call order and cost assumptions

Applicant	Order of paid calls (backend)	What the applicant sees
Before the first OTP	None (eligibility and existence checks are internal)	Page 1 → Page 2 → code
Internally Not Eligible	OTP only	Code → Application submitted
Registered business (self)	OTP → CR_DATA → PERSONS → MOBILE_MATCH → NAFATH	Code → CR verification → details → offer → review → authorization → Nafath
Registered business (signer)	OTP → CR data → owners / managers → (signer) mobile match → Nafath	Signer: link → confirmation → Nafath
Freelancer	OTP → IBAN → FL_CERTS → MOBILE_MATCH → NAFATH	Code → details (IBAN) → offer → review → certificate → Nafath
No certificate found	OTP → certificate retrieval (then stop)	Code → Application submitted (no Nafath cost)
Expired / suspended CR	OTP → CR data (then stop)	Code → saved, Sales follow-up
Ordinary resume	OTP only (valid checks reused)	Code → first unfinished stage

Product cost assumptions (Internal view only): FL_CERTS ≈ SAR 9 · NAFATH ≈ SAR 6 · CR_DATA unknown · PERSONS unknown · MOBILE_MATCH unknown · IBAN unknown · OTP unknown.

Proposed / Product Design

Verification reuse (positive results)

Verification	Depends on	Freshness policy	On ordinary resume
CR data (status, age, activities, National Address, entity)	CR identity	Reusable until invalidated (policy open)	Reused — no new provider call
Owners / managers on the CR	CR identity	Reusable until invalidated (policy open)	Reused — no new provider call
Mobile ↔ National ID ownership	Mobile + National ID of the verifying person	Reusable until invalidated (policy open)	Reused — no new provider call
Nafath	Application + verifying person (National ID)	Reusable until invalidated (policy open)	Reused for the preparer; the signer verifies again every session
Freelancer Certificate (existence + details)	National ID	Reusable until invalidated (policy open)	Reused — no new provider call
Freelancer IBAN ↔ certificate linkage	IBAN + National ID + selected certificate	Reusable until invalidated (policy open)	Reused — no new provider call

Resume normally costs one SMS OTP.

Proposed / Product Design

Negative / technical results — policy per result type

Result	Policy	Merchant sees	Repeat call
Provider unavailable (CR, people, certificate, IBAN)	Retry later. Retries are counted per session and reset on resume; nothing is cached as a result.	Try again / Save & exit	Yes, on retry or resume
Nafath technical failure	Does not use an attempt; bounded per session, reset on resume.	Try again later	Yes, bounded
CR expired / suspended	Application saved as PAUSED_CR and handed to Sales. The CR is re-checked only in the controlled Sales recovery after correction.	Update your CR; Sales will help you continue (no Refresh button)	Only in the controlled recovery
CR age	Not a negative result: a risk attribute, recalculated whenever the CR is retrieved again.	Nothing	No
Mobile ↔ National ID mismatch	A corrected mobile needs a new OTP and a new match check; after the configured checks the verification step pauses.	Use another mobile number	One new check per corrected mobile
Nafath rejected / timed out	Uses one of the application's attempts; after the last one, details are still collected and the application goes to manual verification without a contract.	Retry while attempts remain	Bounded
Certificate changed	Invalidates the checks that depend on it (IBAN linkage, category).	Re-verify the IBAN	IBAN only
IBAN changed	Invalidates the IBAN check only; a different IBAN starts with fresh attempts.	Verify the new IBAN	IBAN only
IBAN ownership mismatch	Two mismatches for the same IBAN; then a different IBAN is required. Technical errors do not count.	Enter another IBAN	Only for a different IBAN
Nafath / certificate / CR success	Reusable until a dependency changes or a freshness policy (open) says otherwise.	Nothing	No

Proposed / Product Design

Review: locked vs editable sections

Section	Editable	Invalidates	Note
Applicant type, CR / National ID	Locked	Nothing	Locked: start a new application for another business
Declared category (Page 1)	Locked	Nothing	Locked once the application exists; the verified government category is authoritative
Verified government data, activities, verified category	Locked	Nothing	Locked: retrieved, never typed
Authorizing owner / manager, verified mobile	Locked	Nothing	Chosen at the Authorization step; locked after Nafath or a signer handoff
Freelancer Certificate	Locked	Nothing	Chosen before Nafath; locked once Nafath is verified
Freelancer IBAN (verified)	Locked	Nothing	Locked once verified; before that it is edited on Business Details (IBAN check only)
Store presence (website / Google Maps)	Yes (transactional, preparer, before a handoff)	Nothing	Re-validates the URL format only
Commercial rate review request	Yes (transactional, preparer, before a handoff)	Nothing	Standard offer unchanged; internal flag only

Transactional edit: values change in a draft; Save applies; Cancel restores the whole application; nothing is invalidated before Save. After a handoff everything is frozen; the signer edits nothing.

Proposed / Product Design

Business Details: store-presence validation (configurable)

Field	Asked when	Accepted	Rejected
Online store / business website	Channel Online or Both	Any real domain, with or without https:// (Saudi and Arabic domains, store platforms)	Social media (instagram.com, facebook.com, fb.com, tiktok.com…) · WhatsApp · link shorteners · invalid format
Google Maps branch / store link	Channel Offline or Both	maps.app.goo.gl, g.page, g.co · goo.gl/maps · maps.google.* · google.*/maps (any country domain)	Any other host or path, invalid format

Fraud / store-presence evidence. Google Maps = actual selling location; National Address = legal / HQ data from the CR. A format check does not prove ownership.

Proposed / Product Design

Abuse protection (architecture; prototype simulates the bounded parts)

Control	Where	Prototype
Request rate limiting	Page 1 and Page 2 endpoints	Page 2 throttled after 5 submissions / session; simulator toggle
IP / device throttling	Edge / API gateway	Documented (not simulated)
Eligibility request limits	Page 1	Documented (not simulated)
OTP resend limit	OTP	3 resends, 30 s cooldown; resend never restores the budget
OTP attempt limit	OTP	3 wrong codes per code; locked after the last code
Bot protection / challenge when suspicious	Page 2	Shown as the throttled state
Signer handoff limit	Authorization	2 versions / 30 days per application; link valid 7 days
Paid-call bounds	Providers	Mobile check 2 / application · Nafath 2 failures / authorization, 3 technical / session · IBAN 2 mismatches / IBAN · provider retries 2 / session

Proposed / Product Design

Pricing & Commission Matrix (PRICING-v4-demo (2026-10-27), synthetic)

Category / subcategory	Standard commission
retail	7.0%
retail-electronics	6.5%
food	6.0%
services	7.5%
fixture	7.0%

Priced on the VERIFIED (government-mapped) category; never on declared revenue. No plan selection in onboarding. A rate review never blocks: the standard offer applies. Frozen at handoff.

Proposed / Product Design

Contract gate (computed from the prototype rule)

Applicant	Situation	Contract
Registered business	Self authorization: mobile matched, Nafath verified	Contract available
Registered business	Nafath failed twice	No contract
Registered business	Mobile ownership not confirmed	No contract
Registered business	Authorization not chosen	No contract
Freelancer	Certificate confirmed, Nafath verified, IBAN linkage verified	Contract available
Freelancer	IBAN linkage not verified	No contract

A signer-handoff contract opens only for the signer, in a session verified with Nafath, on the live version. Without Nafath the application is submitted for manual verification without a contract.

Proposed / Product Design

Outcome pages (merchant-facing)

Outcome	Applicant sees
SUBMITTED	Your application has been submitted successfully.
SUBMITTED_MANUAL	We have received your application.
RECEIVED	Your application has been submitted successfully.
PAUSED_CR	Your application is saved.

RECEIVED (internally Not Eligible) deliberately shows the same page as SUBMITTED.

Proposed / Product Design

Internal reason codes (never shown to the merchant)

Code	Meaning
OK	No restriction
CATEGORY_NOT_SUPPORTED	Category not supported (blacklisted)
REGULATORY_RESTRICTION	Regulatory prohibition
ACTIVITY_REQUIRES_CR	Activity requires a CR
CHANNEL_NOT_SUPPORTED	Channel not allowed for this applicant type
FL_CERT_REQUIRED	Freelancer without certificate
FL_CERT_NOT_FOUND	No usable Freelancer Certificate found
NO_OWNER_MANAGER_ON_CR	No individual owner / manager on the CR (nobody can authorize in V1)
FL_IBAN_NOT_LINKED	Declared "No" to: Is your IBAN linked to your Freelancer Certificate?
ACTIVITY_REGULATED	Verified government activity is not eligible
CR_EXPIRED	CR expired
CR_SUSPENDED	CR suspended
CR_RESTRICTED	CR restricted (provisional route)

Only the controlled CR states (expired / suspended / restricted) have merchant copy, because the merchant can fix them.

Proposed / Product Design

Conflicts with the previous prototype (v5) — resolved in favour of the 2026-10-28 decisions

#	Change
1	v5 showed "Not Eligible" pages (with a personalised reason) and stopped a Freelancer without certificate on Page 1 → now internal only: everyone goes through Identify + OTP and sees Application submitted.
2	v5 asked registered businesses "Are you an owner or manager registered on this CR?" (No = Not Eligible) → removed: the preparer can be anyone; the owner / manager is chosen at the Authorization step.
3	v5 put owner / manager selection and Nafath before Business Details for a CR → now after Review (Authorization choice).
4	v5 showed the Freelancer Certificate after Nafath (a hidden pre-check ran before) → now visible before Nafath; the separate pre-check and its rule flag are gone.
5	v5 sent a live merchant straight to a login hand-off screen → now a popup; login only on click.
6	v5 Nafath attempts were counted per application → now per authorization (a new signer version starts fresh attempts).

Proposed / Product Design

Open product and compliance decisions

Not confirmed rules. Implemented configurably with synthetic values.

---

1. OD-1 · PRODUCT TASK **Exact Eligibility Matrix** — Category · subcategory · applicant type · channel · internal result (Eligible / Not Eligible) · CR / certificate required · regulatory restriction · internal reason · rule version. Revenue does not decide eligibility. Prototype: fixture catalogue.
2. OD-2 · PRODUCT TASK **Exact government activity → category mapping** — Every activity code → Madfu subcategory (many-to-one). Prototype: synthetic codes.
3. OD-3 · PRODUCT / COMPLIANCE DECISION **Multi-activity reconciliation behaviour** — Which activity wins (primary, any, most restrictive), and what happens when several map to different categories. Prototype: demo order (regulated blocks → match confirms → primary reclassifies → unmapped keeps the declaration).
4. OD-4 · RISK DECISION **Risk scoring weights / formula** — Factors and weights (CR age, status, company type, capital, activities, revenue, category, fraud, credit, compliance). Prototype: synthetic demo weights.
5. OD-5 · PRODUCT / COMPLIANCE DECISION **Not Eligible inventory** — The complete list of regulatory / business conditions that cannot continue, incl. how a restricted CR is handled (prototype: Sales route, provisional).
6. OD-6 · RISK DECISION **Low / Medium / High thresholds and Proceed fully / controlled / Hold** — Thresholds and what each decision changes (review depth, limits, pricing). Prototype: demo thresholds and an illustrative mapping, no effect on the journey.
7. OD-7 · PROVIDER / COMPLIANCE DECISION **Showing Freelancer Certificate details before Nafath** — The certificate list is now shown before Nafath (product decision). Confirm that the freelance platform / privacy rules permit displaying certificate details by National ID before strong identity verification.
8. OD-8 · PROVIDER / COMPLIANCE DECISION **Mobile ↔ National ID provider / service behaviour** — Which service confirms mobile ownership, its cost, latency, coverage (e.g. prepaid / non-Saudi numbers) and reuse. Prototype: simulated service.
9. OD-9 · COMPLIANCE DECISION **Behaviour after repeated mobile mismatch** — Prototype: 2 checks per application, then the verification step pauses with progress saved; a signer mismatch ends the authorization version. Whether this escalates, blocks or routes to manual is open.
10. OD-10 · PRODUCT TASK **Exact Pricing & Commission Matrix** — Verified category / subcategory → standard commission; tiers; effective dates. Prototype: synthetic.
11. OD-11 · PRODUCT/COMMERCIAL DECISION **Evidence requested for a better rate** — Which documents or data qualify a rate review, and how an improved rate is applied after the contract. Prototype: two placeholder documents.
12. OD-12 · LEGAL DECISION **Final Freelancer IBAN regulatory / legal wording** — The Page-2 question and the linkage requirement wording.
13. OD-13 · PRODUCT/ENGINEERING DECISION **Freshness rules by verification / result** — How long CR data, people, mobile match, Nafath, certificate and IBAN results stay valid. Prototype: reusable until invalidated; negative results per NEGATIVE_POLICY.
14. OD-14 · OPERATIONS DECISION **Sales / manual recovery workflow after an expired / suspended CR** — Who owns it, how the CR is re-checked after correction (prototype: one controlled re-check by Sales), and how the merchant continues.
15. OD-15 · OPERATIONS DECISION **Final application status lifecycle / SLA** — Statuses after submission (prototype: Submitted, Under review, Action required, Approved, Unable to proceed) and any SLA. None invented.
16. OD-16 · LEGAL DECISION **Authorisation of CR owners / managers** — Whether Legal requires a finer distinction (e.g. signatory powers, partner types) than "owner or manager registered on the CR" for signing.
17. OD-17 · PRODUCT TASK **Final preparer authorization status list** — Prototype buckets (configurable): In progress · Approved · Expired · Not completed. The final Phase-1 list (e.g. In Progress / Approved / Rejected) is to be defined.

Proposed / Product Design

Global UX handover note

> All screens require complete UX/UI validation, error-state, empty-state, loading-state, retry, and edge-case designs. The absence of a specific state from the wireframes does not mean it is excluded from the final product requirements. The UX/UI team is responsible for designing comprehensive error and validation experiences for every field, step, and integration.

These wireframes show structure, content and behaviour. Visual design, motion, Arabic / RTL and accessibility are for the UX/UI team to complete.

Assumptions in the prototype

- Page 1 has no identity, mobile, OTP or URL; Page 2 has identifier, mobile and (eligible Freelancer only) the IBAN question.
- Merchant entity, Application and User / mobile are separate; access to an existing record = OTP to its stored mobile.
- Application and merchant account are separate: no login or password during onboarding.
- A Continue link identifies a DRAFT; OTP to the stored mobile is always required; links stop working on submission, handoff or mobile change.
- A signer link identifies one authorization version; Nafath (not the link) proves the signer; the signer verifies with Nafath again in every session.
- After an expired or ended handoff the preparer may start a new authorization version of the SAME application (self or signer); data and offer stay frozen.
- Self authorization after a cancelled handoff is not a handoff and does not count towards the handoff limit.
- Nafath attempts are counted per authorization (each signer version starts fresh); technical failures stay bounded per session.
- Nafath verifies identity; it is not the contract signature.
- No standard-path document uploads; Freelancers upload nothing.
- Payment plans are not configured in onboarding; the Contract shows the standard commission only.
- Source of Revenue / Source of Income, VAT and branch count are not asked.
